

COMP 3311: Database Management Systems

Movie Streaming Management System

Relational Database Creation and SQL Queries Assignment: Relation Schemas

Use the following relation schemas for this assignment. The primary key of each relation schema is underlined and shown in red color. A foreign key is shown in italic font *and* in bright blue color if not part of a primary key.

AcademyAward(awardId smallint, *awardName* varchar (25))

AppearsIn(movieId smallint, personId smallint, *role* varchar (100))

AwardWin(movieId smallint, personId smallint, awardId smallint)

CreditCard(cardNumber varchar (16), *cardholderName* varchar (35), *cardType* varchar (16),
securityCode varchar (4), *expiryMonth* char (2), *expiryYear* char (4))

Directs(movieId smallint, personId smallint)

Genre(movieId smallint, genre varchar (15))

Movie(movieId smallint, *title* varchar (70), *synopsis* varchar (300), *releaseYear* char (4),
runningTime smallint, *mpaaRating* varchar (10), *imdbRating* decimal (3,1), *bestPictureAwardId* smallint)

MoviePerson(personId smallint, *name* varchar (35), *biography* varchar (500), *gender* char (1), *birthdate* date,
deathdate date)

ReelficsMember(username char (10), *pseudonym* varchar (20), *firstName* varchar (15), *lastName* varchar (20),
occupation varchar (25), *email* varchar (25), *gender* char (1), *birthdate* date,
phoneNumber char (8), *educationLevel* varchar (13), *cardNumber* varchar (16))

Review(movieId smallint, username char (10), *title* varchar (50), *rating* number, *reviewText* varchar (500),
reviewDate date)

StreamingHistory(movieId smallint, username char (10), streamingDate date)

Watchlist(movieId smallint, username char (10))

Constraints

In addition to any constraints that either are described in the problem description, are derivable from the example E-R schema for the movie streaming management system or can be inferred from common sense and/or real-world knowledge, the relation schemas also should constrain the values of the attributes listed below to only the indicated values. Only attribute-level constraints and table-level constraints that can be expressed on a single table should be specified.

<u>Attribute</u>	<u>Allowed and default values</u>
cardNumber	15 or 16 digits
educationLevel	none, primary, secondary, tertiary, post tertiary
expiryMonth	exactly 2 digits
expiryYear	exactly 4 digits
gender	M, F
mpaaRating	Approved, G, Passed, PG, PG-13, Not Rated, R (the default value is Not Rated)
phoneNumber	exactly 8 digits
securityCode	3 or 4 digits
username	between 6 and 10 lowercase letters
