

COMP 3311: Database Management Systems

Movie Streaming Management System

Relational Database Creation and SQL Queries Assignment: Questions and Answers

Posted July 8

Q:	Can there be multiple directors for a movie?
A:	Yes.

Q:	Query 1: May I know if it is either case 1 or case 2 below. Case 1: movies with at least one new/unstreamed genre. Case 2: movies with only new/unstreamed genres.
A:	The movie has to have a genre that no streamed movie has. It may also have genres that streamed movies have. So, it should be Case 1.

Q:	Query 6: Could you clarify whether "streamed a greater number of times by different male members than by different female members" means: a) count a movie multiple times if streamed by the same member more than once, or b) count a movie only once even if streamed multiple times by the same member?
A:	A movie should be <u>counted only once</u> even if streamed multiple times by the same member so that we know whether a movie has been streamed by more male members or by more females members.

Q:	For the AcademyAward table, would award names be stored as "Best Actor" , "Best Actress", "Best Director" etc. but not other formats, such that we can perform queries like `where awardName ='Best Picture'`?
A:	Yes.
