

COMP 3311: Database Management Systems

Lab 7 Exercise: MQL Basic Methods

WHAT TO DO

1. **Download** the zipped folder **Lab7ExerciseFiles.zip** from the *Lab 7* entry of the *Lab Assignments* section on Canvas to the desktop and unzip it. The folder contains the JSON files **students.json** and **courses.json** containing documents for populating the **students** and **courses** collections, respectively, the JSON file **insertMyself.json** and the file **lab7Queries.txt**.
2. **Create** a database named **universitydb** and create two collections named **students** and **courses** in this database using **MongoDB Compass**. Use the two files **students.json** and **courses.json** to populate the **students** and **courses** collections, respectively, with documents.
It is important that you name your collections as stated above as case matters in MongoDB.
3. **Edit** the JSON file **insertMyself.json** by replacing <your student id> (six times), <your first name>, <your last name> and <your email> with, respectively, your student id, your first name, your last name and your HKUST email login name.
4. **Execute** each statement in your **insertMyself.json** file in the **MongoDB** shell.
5. **Modify** the **lab7Queries.txt** file by constructing MQL queries in the specified locations in the file.
6. **Test** your queries in **MongoDB Compass** to ensure that they execute without errors.

WHAT TO SUBMIT

Your modified **lab7Queries.txt** file containing your MQL queries.

This is an individual exercise. Each student must submit their own MQL query file.

HOW TO SUBMIT

By 5 p.m. today, upload your modified **lab7Queries.txt** file to Canvas.

Note: You will only be able to submit a file with extension txt.

TEST YOUR QUERY FILE – USE ONLY MQL CONSTRUCTS DISCUSSED IN THE COURSE

The **MQL** queries in your submission will be tested by executing them against the **universitydb** database. If any query raises an MQL error or if you use MQL constructs not discussed in the course, then you will receive at most 0.5 marks for this exercise. Therefore, test your MQL queries against the **universitydb** database before you submit them and use only MQL constructs discussed in the course.
