

COMP 3311: Database Management Systems

Lab 8 Exercise: MQL Aggregation Framework

WHAT TO DO

1. **Download** the zipped folder **Lab8Exercisefiles.zip** from the *Lab 8* entry of the *Lab Assignments* section on Canvas to the desktop and unzip it. The folder contains the JSON files **students.json** and **courses.json** containing documents for populating the **students** and **courses** collections, respectively, and the query file **Lab8Queries.txt**.
2. **Use** the database and collections created in Lab 7.
If you did not do Lab 7, then go to the Lab 7 Exercise and create the database and collections described there as well as the **insertMyself.json** file and **execute** each statement in your **insertMyself.json** file in the **MongoDB** shell.
3. **Modify** the **Lab8Queries.txt** file by constructing MQL queries in the specified locations in the file.
4. **Test** your queries to ensure that they execute without errors.

WHAT TO SUBMIT

Your modified **Lab8Queries.txt** file containing your MQL queries.

This is an individual exercise. Each student must submit their own MQL query file.

HOW TO SUBMIT

By 6 p.m. tomorrow, upload your modified **Lab8Queries.txt** file to Canvas.

Note: You will only be able to submit a file with extension txt.

TEST YOUR QUERY FILE – USE ONLY MQL CONSTRUCTS DISCUSSED IN THE COURSE

The **MQL** queries in your submission will be tested by executing them against the **universitydb** database. If any query raises an MQL error or if you use MQL constructs not discussed in the course, then you will receive at most 0.5 marks for this exercise. Therefore, test your MQL queries against the **universitydb** database **before** you submit them and use only MQL constructs discussed in the course.
