

COMP 3311: Database Management Systems

Lecture 13 Exercises MongoDB DBMS: MQL Find Method

What To Do

1. **Download** the zipped folder **L13ExerciseFiles.zip** from the *Lecture 13* entry of the *Lecture Assignments* section on Canvas to the desktop and unzip it. The folder contains two JSON files **boats.json** and **sailors.json**, and two query files **L13Exercises1-4.txt** and **L13Exercises5-7.txt**.
2. **Connect** to your **MongoDB** account using **MongoDB Compass**.
3. **Create** a database named **boatReservationsdb** in your **MongoDB** account.
4. **Create** the two collections **boats** and **sailors** in your **boatReservationsdb** database and use the two JSON files **boats.json** and **sailors.json** to populate the collections.
5. **Modify** the **L13Exercises5-7.txt** query file by constructing **MQL** queries in the specified locations in the file.
6. **Test** your queries against the **boatReservationsdb** database to ensure that they execute without errors.

What To Submit

Your modified **L13Exercises5-7.txt** query file containing your **MQL** queries.

You must submit this completed query file. No other type of file submission is acceptable.

How To Submit

By 3:50 p.m. today, upload your modified **L13Exercises5-7.txt** query file to Canvas.

Note: You will only be able to submit a file with extension txt.

TEST YOUR QUERIES – USE ONLY MQL CONSTRUCTS PRESENTED IN THIS LECTURE

The **MQL** queries in your submission will be tested by executing them against the **MongoDB boatReservationsdb** database. If any query raises an **MQL** error or if you use **MQL** constructs not specifically discussed in this lecture, then you will receive at most 0.5 marks for this exercise. Therefore, test your queries against the **boatReservationsdb** database before you submit them and use only **MQL** constructs discussed in this lecture.
