

COMP 3311: Database Management Systems

Lecture 15 Exercises MongoDB DBMS: Aggregation Framework

What To Do

1. **Download** the zipped folder **L15Exercises.zip** from the *Lecture 15* entry of the *Lecture Assignments* section on Canvas to the desktop and unzip it. The folder contains the JSON files **boats.json** and **sailors.json**, and two query files **L15Exercises1-4.txt** and **L15Exercises5-7.txt**.
2. **Connect** to your **MongoDB** account using **MongoDB Compass**.
3. **Create**, if not previously created, a database named **boatReservationsdb** and the two collections **boats** and **sailors** in this database using the two JSON files **boats.json** and **sailors.json** to populate the collections.
4. **Modify** the **L15Exercises5-7.txt** query file by constructing **MQL** queries in the specified locations in the file.
5. **Test** your queries against the **boatReservationsdb** database to ensure that they execute without errors.

What To Submit

Your modified **L15Exercises5-7.txt** query file containing your **MQL** queries.

You must submit this completed query file. No other type of file submission is acceptable.

How To Submit

By 6 p.m. tomorrow, upload your modified **L15Exercises5-7.txt** query file to Canvas.

Note: You will only be able to submit a file with extension txt.

TEST YOUR QUERIES – USE ONLY MQL CONSTRUCTS PRESENTED IN THE LECTURES

The **MQL** queries in your submission will be tested by executing them against the **MongoDB boatReservationsdb** database. If any query raises an **MQL** error or if you use **MQL** constructs not specifically discussed in the course, then you will receive at most 0.5 marks for this exercise. Therefore, test your queries against the **boatReservationsdb** database before you submit them and use only **MQL** constructs discussed in the course.
