

COMP 3311: Database Management Systems

Lecture 8 Exercises Structured Query Language (SQL) DML

Sailor(<u>sailorId</u> , sName, hkid, rating, age)	Reserves(<u>sailorId</u> , <u>boatId</u> , rDate)	Boat(<u>boatId</u> , bName, color, btype)
---	--	--

What To Do

1. **Download** the zipped folder **L8ExerciseFiles.zip** from the *Lecture 8 Exercises* entry of the *Lecture Exercises* group of the *Assignments* section on Canvas and unzip it. The folder contains two SQL script files **boatReservationsdb.sql** and **L8Exercises.sql**.
2. **Execute** the **boatReservationsdb.sql** script file in **Oracle SQL Developer** to create the database against which you can run your exercise queries.
3. **Modify** the **L8Exercises.sql** script file by constructing your SQL queries in the specified locations in the script file.
4. **Test** your queries to ensure that they execute without errors and get the expected result.

This is an **individual** exercise. **EACH STUDENT MUST SUBMIT THEIR OWN SQL SCRIPT FILE.**
A genuine effort must be made to complete **all** exercises to obtain full marks.
USE ONLY SQL CONSTRUCTS SPECIFICALLY DISCUSSED IN THIS LECTURE.

What To Submit

Your modified **L8Exercises.sql** script file containing your SQL queries.

You must submit this completed script file. No other type of file submission is acceptable.

How To Submit

By 6 p.m. tomorrow upload your modified **L8Exercises.sql** script file to the *Lecture 8 Exercises* entry of the *Lecture Exercises* group of the *Assignments* section on Canvas.

Note: You will only be able to submit a file with extension **sql**.

TEST YOUR SCRIPT FILE – USE ONLY SQL CONSTRUCTS DISCUSSED IN THIS LECTURE

The **SQL** queries in your submission will be tested by executing them against the **boatReservationsdb** database. If any query raises an **SQL** error or if you use **SQL** constructs not specifically discussed in this lecture, then you will receive at most 0.5 marks for this exercise. Therefore, test your queries against the **boatReservationsdb** database **before** you submit them and use only **SQL** constructs discussed in this lecture.
